

Sheep Better Off With Thermoskin

Bill Fletcher of Bellevue Park Merino Stud Berridale runs fine wool Merinos and at the end of August he shears 500 ewes. Initially they were putting on and pulling off sheep coats which were not really satisfactory. Bill heard about Thermoskin and decided to use it. He said "we had the spray unit set up in the sheep yard and the sheep were shivering on one side and then on the other side they stopped shivering. I couldn't believe how a silly little mist could make such a difference."

The following year they ran the shorn sheep through at 6 p.m. in the evening. That night they had a couple of inches of snow but had no losses as "the sheep were not freezing and tucked up behind every log and stick they can find". Bill said "After treating sheep with Thermoskin they are

out feeding and better off right from the word go. It is one of the products that have really helped us in this area, I can't speak more highly of it."

In winter, the Monaro region is the coldest part of mainland Australia outside the Alps, with extremes in weather that can have a variance of about 20 degrees in the temperature structure through a day. This is quite hard on animals and one of the reasons why Thermoskin came into being. Bill's supplier of Thermoskin, Allan Hood CRT Cooma, said "Thermoskin actually does what it says it is going to do. It works and saves a lot of time and a lot of effort and it definitely saves sheep lives for our customers.

The cost is cheaper than what most blokes are doing for rugging.

Using Thermoskin is a better way to protect your stock investment."
