

THERMOSKIN PROTECTS SHORN SHEEP IN COLD WEATHER

**NO MORE HUDDLED SHEEP. NO MORE WEIGHT LOSS.
JUST CONFIDENT, STRESS FREE SHEARING...
EVEN IN UNPREDICTABLE WEATHER.**

Thermoskin is a natural spray-on shield that helps your sheep maintain condition after shearing. It keeps them warm, feeding, and protected from sudden cold snaps for up to six weeks, so you can shear when it suits your operation, without the risk.

Used immediately after shearing, Thermoskin forms a breathable barrier that supports body temperature and reduces post-shearing stress *for both you and your sheep.*

**Sheep
Health**

**Environmentally
Friendly**

**Maintain
Pre-Shorn
Condition**

“To help maintain body condition and protect against the effects of sudden cold weather following shearing, we apply the spray-on weather shield Thermoskin. This product provides the sheep with effective insulation, preventing post-shearing setbacks and promoting faster healing of any minor cuts.”
 – Ray and Bev Norman, Illabo

WHY FARMERS USE THERMOSKIN

1

Protects sheep from cold weather after shearing

2

Reduces weight loss and improves recovery

3

Minimises risk of sheep losses in cold snaps

4

Sheep keep feeding instead of huddling

5

Increases joining potential and fleece growth

6

No coats, no snow combs, no shed required

7

Can be used year-round, even in winter

“The day after shearing, our sheep are out feeding in frost, wind or rain. They grow their fleece, gain weight optimising joining potential all from day one, and we can stop stressing about the weather.”
 – Ian & Helen Cathles, Wee Jasper

HOW IT WORKS

Thermoskin is sprayed onto freshly shorn sheep using a portable spray unit positioned at the end of the race. The unit creates a fine mist that covers each sheep in seconds, including the tips of the wool and bare skin (stomach, flanks, etc.)

Takes a few seconds per sheep

Uses only 50ml per animal

Dries in around 10 minutes

Fully effective within 15 minutes even in rain, snow, or wind

Thermoskin is natural, biodegradable, and physiologically safe. It does not block the pizzle, anus, vulva, eyes, ears, or mouth.

WHY THERMOSKIN WAS CREATED

In the late 1990s, industrial chemist Henry King began speaking with sheep breeders about the devastating impact of cold snaps on shorn sheep. Many farmers were losing animals despite their best efforts.

After many years of research and development, Thermoskin was launched in 2008. Since then, it has protected many thousands of sheep across Australia and become a trusted, go-to solution for managing sheep welfare and productivity after shearing.

“

“We ran sheep through the spray unit at 6pm. That night we had snow, but not a single loss. They stayed warm and were out feeding the next day.”
— Bill Fletcher, Berridale

“

“Sheep don’t lose weight after shearing. They go into lambing better, and they’re still eating even in the cold.”
— Brian Anderson, Binda

FREQUENTLY ASKED QUESTIONS

What type of sheep can it be used on?

Thermoskin can be applied to all ages and breeds of sheep, more successfully on sheep scored 2 and higher. It has also been used successfully on mohair and angora goats, and even horses, any animal that needs to be kept warm.

Is the product safe?

Yes. Thermoskin is physiologically harmless, environmentally friendly, 100% biodegradable, and made from all natural ingredients. It will not block the animal's eyes, ears, mouth, pizzle, vulva, or anus.

Can it be used with lice treatment?

Thermoskin can be used with solvent-based lice treatments... but not water-based. If sheep are treated with water-based products, they must be completely dry before applying Thermoskin.

Are there any effects on the wool?

No. Thermoskin is safe for wool and does not damage the fleece. Any residue is easily removed through normal scouring practices.

How do you store the product?

Store the Thermoskin drum at 6°C or above. Below this temperature, the product may separate but will reconstitute once brought back to room temperature

How do you apply the product?

A portable automatic spray unit has been specially designed to atomise Thermoskin as shorn sheep run through. The unit is positioned at the end of the race so that sheep pass through one at a time. The spray unit is available to purchase from your supplier.

How do you clean the equipment?

Clean the spray unit at the end of each day to prevent blocked spray heads. Simply run methylated spirits through the unit using the prime switch for approx. 30 seconds. Then seal the dip tube to protect it from dust.

WHERE TO BUY THERMOSKIN

Thermoskin is available across Australia through a network of trusted suppliers. Contact us directly for local distributors or to become a reseller:
